Cypripedium St. Alban

(CYPRIPEDIUM ANTIGONE x CYPRIPEDIUM HARRISIANUM)

An established cross of dependable habits, this plant produces deep maroon flowers on erect stems of eight to twelve inches. The leaves are distinctively mottled making an attractive foliage plant during its non-blooming period. Growth characteristics are comparable with Cattleyas or for individual growth in your home. Flowers in fall and spring with waxy, deep-toned blooms that will last several weeks.
